

# **Panasonic**

## Ideal for solar inverter compact size. 1 a 22 A/33 A power relays

# LF-G RELAY

 Contact gap: 1.5 mm .059 inch and 1.8 mm\*\*\* .071 inch

Compliant with European photovoltaic standard (IEC62109\* and VDE0126\*\*).

- \*Safety standard of PV power inverter
- \*\*German safety standard of PV power inverter
- \*\*\*Due to addition of altitude stipulation (2,000 m 6,561.68 ft or more) to IEC62109.

EN61810-1 certified: 2.5 kV surge breakdown voltage (between contacts)

- High insulation resistance Creepage distance between contact and coil terminal: Min. 9.5 mm .354 inch Clearance distance between contact and coil terminal: Min. 6.5 mm .256 inch Surge breakdown voltage: 6 kV
- Coil holding voltage contributes to saving energy of equipment The coil holding voltage can be reduced up to 35%V of the nominal coil voltage (Ambient temperature: 20°C 68°F). Power consumption at the lowest coil

holding voltage: 170 mW equivalent

\*Coil holding voltage is the coil voltage after 100 ms from the applied nominal coil voltage.

\*When the ambient temperature during use is 85°C 185°F, make the coil holding voltage between 45% and 80%V of the nominal coil voltage.

 Conforms to various safety standards

UL, C-UL and VDE approved

## TYPICAL APPLICATIONS

- Photovoltaic power generation systems (Solar inverter)
- Uninterruptible Power Supplies (UPS)
- Home appliances
- Office equipment

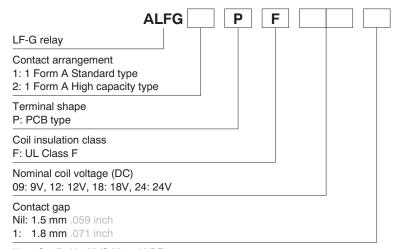

## **FEATURES**

High capacity

High capacity control possible at 22A/ 33A (High capacity type) 250V AC rating in compact size:

L:  $15.7 \times W$ :  $30.1 \times H$ : 23.3 mmL: .618 × W: 1.185 × H: .917 inch

## ORDERING INFORMATION

## Note: Certified by UL/C-UL and VDE

## **TYPES**

Conditions  Conditions for operation, transport and storage*5  Conditions for operation, transport and storage*5  Ambient temperature: -40°C to +60°C -40°F to +140°F (When nominal coil voltage applied) -40°C to +85°C -40°F to +185°F (Coil holding voltage is when 45 to 80%V of nominal coil voltage is applied.)  Humidity: 5 to 85% R.H. (Not freezing and condensing at low temperature)  Air pressure: 86 to 106 kPa	Conditions			-40°C to +85°C -40°F to +185°F (Coil holding voltage is when 45 to 80%V of nominal coil voltage is applied.)  Humidity: 5 to 85% R.H. (Not freezing and condensing at low temperature)				
Unit weight Approx. 23 g .81 oz	Unit weight			Approx. 23 g .81 oz				

Notes: \*1. This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.

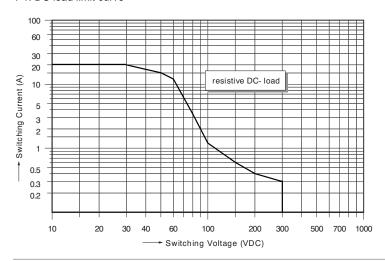

<sup>\*2.</sup>Wave is standard shock voltage of  $\pm 1.2 \times 50 \mu s$  according to JEC-212-1981

<sup>\*3.</sup>In accordance with UL class-F
\*4.Coil holding voltage is the coil voltage after 100 ms from the applied nominal coil voltage.
\*5.The upper limit of the ambient temperature is the maximum temperature that can satisfy the coil temperature rise value. Refer to 1. Usage, transport and storage conditions in NOTES.

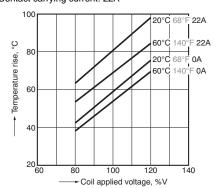

## REFERENCE DATA

## LF-G (ALFG)

#### NOTES

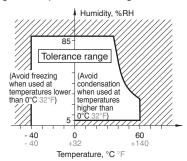

## ■ Usage, transport and storage conditions

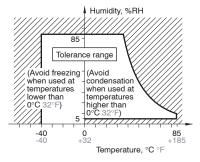

1) Temperature:

-40 to +60°C -40 to +140°F (When nominal coil voltage applied)
-40 to +85°C -40 to +185°F (When coil holding voltage is 45% to 80% of the nominal coil voltage)

2) Humidity: 5 to 85% RH (Avoid freezing and condensation.) The humidity range varies with the temperature. Use within the range indicated in the graph below.

3) Atmospheric pressure: 86 to 106 kPa Temperature and humidity range for usage, transport, and storage

\* -40 to +85°C -40 to +185°F (When 45% to 80%V of coil holding voltage)

#### 4) Condensation

Condensation forms when there is a sudden change in temperature under high temperature and high humidity conditions. Condensation will cause deterioration of the relay insulation.

5) Freezing

Condensation or other moisture may freeze on the relay when the temperatures is lower than 0°C 32°F. This causes problems such as sticking of movable parts or operational time lags. 6) Low temperature, low humidity environments

The plastic becomes brittle if the relay is exposed to a low temperature, low humidity environment for long periods of time.

#### ■ Solder and cleaning conditions

- 1) Please obey the following conditions when soldering automatically.
- (1) Preheating: Within 120°C 248°F (solder surface terminal portion) and within 120 seconds
- (2) Soldering iron: 260°C±5°C 500°F±41°F (solder temperature) and within 6 seconds (soldering time)
- 2) Since this is not a sealed type relay, do not clean it as is. Also, be careful not to allow flux to overflow above the PC board or enter the inside of the relay.

#### ■ Certification

 This relay is UL/C-UL certified. UL/C-UL;

Standard type (Contact Gap 1.5 mm .059 inch & 1.8 mm .071 inch):
 22A 277V AC General Use
 High capacity type
 (Contact Gap 1.5 mm .059 inch):
 31A 277V AC General Use
 High capacity type
 (Contact Gap 1.8 mm .071 inch):
 33A 277V AC General Use
2) This relay is certified by VDE
(VDE0435).

VDE:

Standard type (Contact Gap 1.5 mm .059 inch & 1.8 mm .071 inch): 22A 250V AC  $cos\phi = 0.8$  High capacity type (Contact Gap 1.5 mm .059 inch): 31A 250V AC  $cos\phi = 0.8$  High capacity type (Contact Gap 1.8 mm .071 inch): 33A 250V AC  $cos\phi = 0.8$ 

#### **■** Cautions for use

- 1) For precautions regarding use and explanations of technical terminology, see Relay Technical Information.
- 2) To ensure good operation, please keep the voltage on the coil ends to  $\pm 5\%$  (at  $20^{\circ}\text{C }68^{\circ}\text{F}$ ) of the rated coil operation voltage. Also, please be aware that the pick-up voltage and drop-out voltage may change depending on the temperature and conditions of use.
- 3) Keep the ripple rate of the nominal coil voltage below 5%.
- Please test with actual device when using the coil holding voltage with PWM control.
- 5) The cycle lifetime is defined under the standard test condition specified in the JIS C5442 standard (temperature 15 to 35°C 59 to 95°F, humidity 25 to 75%).

Check this with the real device as it is affected by coil driving circuit, load type, activation frequency, activation phase, ambient conditions and other factors. Also, be especially careful of loads such as those listed below.

- (1) When used for AC load-operating and the operating phase is synchronous. Rocking and fusing can easily occur due to contact shifting.
- (2) Highly frequent load-operating When highly frequent opening and closing of the relay is performed with a load that causes arcs at the contacts, nitrogen and oxygen in the air is fused by the arc energy and HNO<sub>3</sub> is formed. This can corrode metal materials.

Three countermeasures for these are listed here.

- Incorporate an arc-extinguishing circuit.
- · Lower the operating frequency
- · Lower the ambient humidity
- 6) This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.
- 7) Heat, smoke, and even a fire may occur if the relay is used in conditions outside of the allowable ranges for the coil ratings, contact ratings, operating cycle lifetime, and other specifications. Therefore, do not use the relay if these ratings are exceeded.
- 8) If the relay has been dropped, the appearance and characteristics should always be checked before use.
- 9) Incorrect wiring may cause unexpected events or the generation of heat or flames.
- 10) If complying with the Electrical Appliance and Material Safety Law (300V AC), please use with a nominal current no higher than 10A.
- 11) In order to reduce the occurrence of solder cracking due to thermal stress on the PC board, please use a double-face through hole PC board.

## For Cautions for Use, see Relay Technical Information.
